

**Description**

An oak wood tannin which has been pretreated in a special process. This unique technology eliminates all tannic and astringent substances already during the production process.

Fine red-brown powder.

The application of Vinoferm® Tannivin Superb is permitted according to EU laws and regulations presently in force and complies with the purity regulations of the International Codex for wine treatment agents of the OIV.

Aim of Treatment

In wine treatment, tannin is a traditional product already in use for many years. Tannin optimizes the precipitation potential of the wines, necessary for later protein finings. By eliminating those components which have a tannic and astringent effect, the harmonizing and colour stabilizing components can develop even stronger in the wine.

After the addition of this product, the wines present themselves with considerably enhanced structure, rich in finesse and strengthened in body and colour. The wines are balanced with good body and acidity, the sensory sensation on the palate is intensified and supported. The full-bodied, intensive character of the wines is however smooth and free from astringent and tannic components.

Dosage

Red wine 1-20 g/100 L

White wine 1-5 g/100 L

The dosage depends on the characteristic of the respective wine to treat. It is therefore recommended to carry out pre-tests.

Application

Applied in mash and young wine, preferably after the first racking and after completed malo-lactic fermentation, or in the wine. If required, later treatments are also possible. Addition is made directly to the wine.

Vinoferm® Tannivin Superb is dissolved in some water and is then added to the vessel with the total quantity of wine. Mix thoroughly. Low oxygenation in the course of addition promotes the effect of the product, if desired.

Storage

Store this product in a light-protected place and protect from influences of moisture and foreign odours. Reseal opened packagings immediately and tightly.
