deacidifier FBN Vinoferm 250 g

Deacidifier FBN

Compound deacidifier with a calcium carbonate, potassium carbonate and potassium tartrate base. Because of its composition, deacidification takes place in a more balanced way than when using a simple deacidifier. This benefits the overall taste of the wine. Dosage: 15 g/10 litre reduces the acidity by 1 g/litre.

vinoferm®

Specification

Packing dimensions and weight:

| | |
|----------|---------------|
| Weight | 0.255 kg |
| Length | 18.9 cm |
| Height | 2.7 cm |
| Width | 11.2 cm |
| EAN code | 5425000396604 |

When and how to use a deacidifier?

Deacidification is best done as early as possible. Calcium carbonate is the most commonly used deacidifier. A great deal of frothing sometimes occurs on deacidification. You should therefore use a sufficiently roomy barrel/receptacle. Add the necessary quantity of deacidifier to the must, stir for a few minutes and leave to rest for a while. Stir again and once more leave to rest. Repeat this a few times until there's no more CO₂ formed (no sound of gas). Now leave everything to settle for 12-24 hours. Then siphon the must/wine, leaving the white layer at the bottom.
