## deacidifier FBN VINOFORM 1 kg

### Deacidifier FBN

Compound deacidifier with a calcium carbonate, potassium carbonate and potassium tartrate base. Because of its composition, deacidification takes place in a more balanced way than when using a simple deacidifier. This benefits the overall taste of the wine. Dosage: 15 g/10 litre reduces the acidity by 1 g/litre.

**vineform®**

### Specification

Packing dimensions and weight:

Weight	1.01 kg
Length	23.4 cm
Height	3.6 cm
Width	20.2 cm
EAN code	5425000396611

### **When and how to use a deacidifier?**

Deacidification is best done as early as possible. Calcium carbonate is the most commonly used deacidifier. A great deal of frothing sometimes occurs on deacidification. You should therefore use a sufficiently roomy barrel/receptacle. Add the necessary quantity of deacidifier to the must, stir for a few minutes and leave to rest for a while. Stir again and once more leave to rest. Repeat this a few times until there's no more CO<sub>2</sub> formed (no sound of gas). Now leave everything to settle for 12-24 hours. Then siphon the must/wine, leaving the white layer at the bottom.
