Refractometer 0-170°Oe / 0-25 vol% with ATC

A refractometer is an optical precision instrument which determines the density of a liquid by the index of refraction. Click here for a practical overview of our refractometers.

This refractometer is a special model for winemakers. The refractometer has 2 scales to quickly measure the sugar content and potential alcohol of the juice. Accurate, yet easy to use: simply place a few drops of liquid on the prism and the density is directly readable. There is no need for temperature correction due to automatic temperature compensation (ATC).

- Scale 0-170°Oe (Oechsle), reading per 1°
- Scale 0-25 vol% potential alcohol, reading per 1%
- ATC: Automatic Temperature Compensation (10°C-30°C)
- High quality sustainable aluminium construction
- Easy to calibrate
- Sturdy storage case

Content:

- refractometer
- pipette
- mini-screwdriver
- manual
- storage case
- soft cleaning cloth

vineform®

Specification

Packing dimensions and weight:

Weight	0.334 kg
Length	22.1 cm
Height	5.5 cm
Width	7.5 cm
EAN code	5425000399292
