## Refractometer 0-18°Plato with ATC

A refractometer is an optical precision instrument which determines the density of a liquid by the index of refraction. Click here for a practical overview of our refractometers.

This refractometer is a special model for beer brewers, and is used to measure the sugar content of the wort, as well as to follow the rinsing of the brewer's spent grains. Accurate, yet easy to use: simply place a few drops of liquid on the prism and the density is directly readable. There is no need for temperature correction due to automatic temperature compensation (ATC).

- Scale 0-18°Plato, reading per 0.1°
- ATC: Automatic Temperature Compensation (10°C-30°C)
- Easy to calibrate
- High quality sustainable aluminium construction
- Sturdy storage case

### Content:

- refractometer
- pipette
- mini-screwdriver
- manual
- storage case
- soft cleaning cloth

**BROUWLAND**

### Specification

Packing dimensions and weight:

Weight	0.356 kg
Length	22.1 cm
Height	5.5 cm
Width	7.5 cm
EAN code	5425000399322
