Refractometer 0-80 vol% with ATC

A refractometer is an optical precision instrument which determines the density of a liquid by the index of refraction. Click here for a practical overview of our refractometers.

This refractometer is a special model for distillers and liqueur makers to determine the alcohol content of distillates without sugar. Accurate, yet easy to use: simply place a few drops of liquid on the prism and the density is directly readable. There is no need for temperature correction due to automatic temperature compensation (ATC).

- Scale 0-80% v/v alcohol, reading per 1%
- ATC: Automatic Temperature Compensation (10°C-30°C)
- High quality sustainable aluminium construction
- Dual scale: Brix + SG
- Easy to calibrate
- Sturdy storage case

Content:

- refractometer
- pipette
- mini-screwdriver
- manual
- storage case
- soft cleaning cloth

BROUWLAND

Specification

Packing dimensions and weight:

Weight	0.352 kg
Length	22.3 cm
Height	5.6 cm
Width	9.1 cm
EAN code	5425000399346
