

Ss Brewtech™ FTSs Temperature Control for Unitank and Nano Brite tank (TC clamp)

Art. 017.199.1

<https://www.brouwland.com/en/qr/017.199.1>

A properly controlled fermentation temperature is critical to producing quality beer. The FTSs is the result of many napkin sketches and applying thermodynamics to advanced brewing practices. The system is elegant in its simplicity yet incredibly efficient.

The FTSs uses a precision temperature controller that constantly monitors the temperature of your fermentation to within 1° of its set point. When the temperature of your beer varies by over 1° the system kicks in and circulates your chill source liquid through the chiller coil until temperature is stabilized.

Your chill source can be as simple as a cooler with ice or as sophisticated as the Ss Glycol Chiller. Alternatively if you need to warm your beer, the system is capable of circulating warm water through the coil to bring temperatures up. If your setup requires temperatures to be corrected both up and down, check out the FTSs² Chilling and Heating system.

For use on all Unitanks and Brewmaster Edition Brite Tanks.

Specifications:

- Digital temperature control
- Pro grade submersible pump
- Global 110-240 V power supply
- Vinyl tubing included
- C° and F° display
- Display mount (TC) included

Specification

Packing dimensions and weight:

Weight	1.904 kg
Length	30 cm
Height	8 cm
Width	25 cm
EAN code	5420069837815
